(54) CUSTOMER INFORMATION REGISTRATION REPEATING SYSTEM

24.

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a system which mediates the distribution of demand information regarding a purchase of a merchandise, etc., that a general customer has and information on an organization which desires to obtain the demand information.

SOLUTION: A demand information registering means 11 registers demand information from many unspecified customer terminals 3 in a demand information data base 21 by making good use of homepages, etc., of the Internet. A contractor authentication means 14 authenticates a browsing requester by referring to a contractor information data base 23 with a user ID, etc., at a request for browsing from a previously contacted member. Then a demand information browsing means 13 sends corresponding demand information to the contractor terminal 4 by performing retrieval from the demand information data base 21 according to demand information extraction information and registers the use state in a use information data base 22. Further, a charging information managing means 15 registers charging information corresponding to use information in a charging information data base
